APPENDICES
and data sheets

PRODUCTS concerned

CATEGORY 3

Hand tools and accessories

Large non-electric, non-combustion items and machinery

Tools and supports for working at height

Personal protection equipment and accessories for DIY

Tarpaulins for DIY

Buckets, troughs and containers

CATEGORY 4

Garden upkeep hand tools

Personal protection equipment for gardening

Flower pots and containers

Tarpaulins, covers, films and nets

Outdoor equipment

Non-masonry outdoor structures

CATEGORY 1

Painting tools

CATEGORY 2

Combustion engine-powered machinery and equipment

The following are excluded from the regulatory scope:

- > Products designed exclusively for professional use.
- > Hardware (Building Products and Materials EPR, also known as Building EPR).
- > Masonry constructions (Building EPR).
- > Decorative garden ornaments.
- > Electrical and electronic devices (WEEE EPR).
- > Paddling pools covered by the Toys EPR channel.
- > Swimming pools covered by the Building EPR channel.

**WHAT HAPPENS TO
my eco-fee?**

WHAT HAPPENS TO my eco-fee?

The eco-fee allows Ecomaison to organise and **fund the collection** of building and housing products and materials, as well as **the repair, reuse and recycling** of sorted products.

Source: key figures 2024

PRICING IS CALCULATED BASED ON 3 CRITERIA:

› Product features

The rate depends on the product type, weight, materials used and the product's recyclability or recycling disruptors.

› Management costs

The rate reflects the real costs of the sector, including product collection, sorting, transportation and processing. The smaller the object, the more logistics required to collect it, resulting in higher costs.

› Eco-modulations

Bonuses and penalties may apply depending on eco-design criteria (extension of useful life, incorporation of recycled materials, recycling disruptors, etc.).

calculating my eco-fee and **improving** my environmental performance

All the info on eco-modulations

Rewarding my commitment

what are eco-MODULATIONS?

- › Eco-modulations are a scheme provided by Ecomaison to **reward the circular efforts** of our most virtuous members.
- › By sourcing raw materials from renewable or recycled resources, extending product useful life and implementing a circular purchasing policy, you can **improve your eco-fee and/or benefit from bonuses**.
- › By adopting these practices, you can optimise your obligations, **make your business more circular and drive your industry's performance**.

My Ecomaison invoice

	Total
Eco-fee for initial market launch on French territory (new or second-hand) I owe Ecomaison	€A
Reduction of eco-fee due to eco-modulations	€B
My total eco-fee	A-B = €C
Bonuses for incorporating recycled materials Ecomaison owes me	€D
MY TOTAL CONTRIBUTION PAID	C-D = €E

How can I improve my contribution?

Sustainable management

Recyclability

Extension of useful life
Provision of spare parts

Incorporation of recycled materials (IRM)

SUSTAINABLE resource management

The sustainable product management criterion relates to the material of which the product is made.

Sustainable management means that:

- › the product meets a minimum threshold concerning the amount of its materials sourced from **sustainably managed resources**;
- › the products or their constituent materials are **certified** or carry a corresponding label.

*NB: the sustainable management bonus is subject to the absence of recycling disruptors.

Eligible materials:

Wood

Bio-based materials

made from plant or animal fibres other than wood, wood derivatives, paper and cardboard

WE PROVIDE TOOLS:

To view the list of recycling disruptors, see the [dedicated page](#) (in French only).

WE PROVIDE SUPPORT:

The item code incorporates eco-modulation for sustainable management.
It's easy!

Levels of recyclability

Your product's recyclability depends on its constituent materials.

To benefit from this eco-modulation, you must take into account the materials used during the manufacture of the product.

A product composed mainly of metal, wood, single-resin plastics or inert materials will entitle you to a **lower eco-fee, as it is more easily recyclable** than a product made from a combination of materials or multiple resins.

*NB: the recyclability bonus is subject to the absence of non-sustainable materials and recycling disruptors.

4 Ecomaison recyclability levels

WE PROVIDE SUPPORT:

The item code incorporates the eco-modulation for recyclability **It's easy!**

TO FIND OUT

the recyclability of the products you launch onto the market, head to the corresponding [data sheets](#).

RECYCLABILITY LEVELS for DIY and gardening products

- **Metal** > 95%
- **Solid wood or Solid wood + metal** > 95%
- **Single-resin plastics** > 95%
Other recyclable synthetic material > 95%
- **Metal** > 50%
No disruptors
- **Solid wood** > 50%
No disruptors
- **Inert materials** > 95%
- **Ceramic** > 95%
- **Synthetic textiles or plastic mix** > 95%
- **All materials**

PROVISION of spare parts

This eco-modulation rewards the **provision of spare parts by the marketer** (manufacturer or distributor) to the consumer on request:

- › inherent to the main function of the product (excluding accessories);
- › available even after the final marketing of the product (for a duration of 5 years for DIY and gardening products).

*NB: the spare part availability bonus is subject to the absence of recycling disruptors.

WE PROVIDE SUPPORT:

The item code includes the eco-modulation for extending the useful life.

It's easy!

Eco-modulated codes for spare parts end with the number 1.

INCORPORATION of recycled materials (IRM)

Ecomaison rewards you for **incorporating recycled raw materials** into a product launched on the market⁽¹⁾.

The bonus is calculated based on the amount of recycled materials incorporated into your product.

This concerns products containing the following materials⁽²⁾:

Plastics

(1) A breakdown by material can be found in the [data sheets](#).

(2) The technical details of the materials concerned, recycling disruptors, minimum incorporation thresholds and the [list of hazardous or REACH-classified substances](#) can be found in the fact sheets included in the appendices.

*NB: the minimum thresholds of post-consumer recycled materials incorporated (by materials or products) are indicated in the [data sheets](#) appended to the price guide.

These materials are eligible if they:

- **are exclusively sourced from end-of-life products** (post-consumer waste), from a holder listed with an approved eco-organisation in France;
- **do not contain** any substances that are hazardous or listed under REACH;
- reach a **set minimum threshold** (in %) of the product's material composition;
- fulfil the principle of proximity, meaning that the stages of collection, sorting, recycling and incorporation of **recycled materials are all carried out:**
 - within a 1,500 km radius of France's barycentre;
 - in an EU Member State.

These plastic products are not eligible if they:

- incorporate recycled plastic in a composite matrix, i.e. plastic resins associated with reinforcements forming a composite material with strengthened physical and mechanical properties;
- contain recycling disruptors identified by approved eco-organisations for the corresponding product category (2);
- contain less than 50% post-consumer recycled plastic incorporated into the finished product.

concrete example

Example of how the **eco-design efforts** proposed and rewarded by Ecomaison can improve your contribution.

For a 1 kg flower pot

CODIFYING **my products**

CODIFYING my products

ONE PRODUCT = ONE 11-DIGIT ITEM CODE

The item code allows you to apply the corresponding **eco-fee pricing scales** and to declare the launch of products subject to regulation.

NB:

Two codification methods have been adopted for DIY and gardening products:

- > **codifying by weight in euros/tonne** of marketed products;
- > **codifying by item** in order to determine an amount in accordance with the product's weight category.

Our [online solution](#) for **generating product codes and calculating the associated eco-fee**.

CONSULT OUR PRICING SCALES:

Item code and eco-fee generators are at your disposal.

- > [Pricing scales applicable as of 01/01/2026](#)
- > [Online item codification tool](#)

DECLARING my contribution

Your eco-fee must be declared to Ecomaison on a quarterly basis.

Ecomaison offers two types of declarations for companies whose market launches cover **fewer than 10,000 items per year⁽¹⁾**, **subject to a total marketed weight of under 15 tonnes:**

Declaration for codification

The amount of your eco-fee is **based on product codes**.

All of your products with eco-modulated item codes are therefore listed.

Your eco-design efforts are taken into account and highlighted.

Flat-rate declaration

You apply an annual fee per product category and per unit, without declaring the product weight or material, by using the appropriate code

Your administrative procedures are less complicated, but your eco-design efforts are not taken into account.

(1) Subject to a maximum unit weight of 10 kg and a total weight of less than 15 tonnes.

(2) This fee applies without declaration of the category, weight or material of these products.

A close-up photograph of a workshop bench. The bench is made of a light-colored wooden surface with a darker, textured edge. On the bench, there are several tools: a pair of silver-colored pliers with green handles, a screwdriver with a wooden handle, and a yellow work glove. The background is blurred, showing more tools and a red object. The text "KNOWING the rates for 2026" is overlaid on the image in a bold, sans-serif font. "KNOWING" is in orange, and "the rates for 2026" is in dark green.

appendices and data sheets

Recycling disruptors

Incorporation of recycled
materials (IRM)

Sustainable
management criteria

Overview of supporting
documents

RECYCLING disruptors

These are elements or materials that prevent recycling.
There are 2 categories:

Chemical disruptors

Hazardous substances within the meaning of the AGEC Act (Art. 13), i.e.:

- Substances of “**very high concern**” within the meaning of the European REACH regulation, in a concentration above 0.1% weight by weight.
- Substances listed under Annex XVII to REACH in **quantities exceeding the established limit**.
- **Substances** subject to **the POPs regulation** (Appendix 4).

[READ MORE](#)

Physical disruptors

- Materials or assembly methods that **do not allow the extraction of materials** or that **compromise the quality of the flow to be recycled**.

WE PROVIDE TOOLS:

Discover the list of disruptors to assess the recyclability of your products using the Ecomaison tool.

STATEMENT OF PRESENCE of hazardous substances

The obligation to display information on the presence of a hazardous substance applies when it is present in concentrations above 0.1% weight by weight in a substance, mixture or item, within the meaning of points 1, 2 and 3 of Article 3 of Regulation (EC) No. 1907/2006 known as REACH, as supplemented and updated by order of the Minister for the Environment.

Information on hazardous substances
can be displayed via:

- The product sheet.
- The [Scan4Chem](#) application.
This app is financed by the European Commission as part of the LIFE programme, in which France is actively involved through the French National Institute for Industrial Environment and Risks (INERIS).

**The statement to be
displayed is as follows:**

CONTAINS A HAZARDOUS SUBSTANCE

OR

**CONTAINS A SUBSTANCE
OF VERY HIGH CONCERN**

The statement is supplemented by the name
of each hazardous substance present.

Renewable Resources sustainable management criterion

of physical or chemical
recycling disruptors, a list of
which can be found via our
[recyclability analysis tool](#).

Renewable Resources

sustainable management criterion

SUSTAINABLE MANAGEMENT - WOOD

The “**Sustainable Management - Wood**” rate is applicable in accordance with the following conditions:

Solid wood and similar products

Minimum “Sustainable Management” wood content in the product:

DIY & gardening: **50%**

Material

“Sustainable management” wood, i.e. derived from sustainably managed forests and certified:

- PEFC, FSC;
- or under any equivalent due diligence system

Paper, cardboard and chipboard products

Minimum “Sustainable Management” wood content in the product:

DIY & gardening: **50%**

Material

“Sustainable management” wood, i.e. derived from sustainably managed resources and certified:

- PEFC, PEFC Recycled, FSC Mix, FSC Recycled;
- or under any equivalent due diligence system

Labels & Certification

or equivalent

These labels and certifications are accepted to indicate the resource's sustainable management.

IRM application criteria

Three conditions must be fulfilled to benefit from the bonus related to the incorporation of recycled materials:

Sources

The recycled material comes exclusively from post-consumer waste, i.e. end-of-life products.

- It must: come from a holder/operator listed by a government-approved eco-organisation as part of the EPR strategy;
- have been collected, sorted, recycled and incorporated within 1,500 km of France's barycentre and/or in an EU Member State.

Quality

The recycled material must not compromise the future recyclability of the manufactured product.

It must not contain recycling disruptors beyond the established thresholds.

Quantity

Bonuses and eco-modulations are calculated according to the quantities of post-consumer recycled materials incorporated into the material making up the finished product.

IRM application criteria

ELIGIBLE VOLUME MINIMUM THRESHOLD

Bonuses are **calculated for the quantities of post-consumer recycled waste incorporated** into the material making up the finished product, for all tonnes exceeding a minimum incorporation threshold.

How to find out if my product is eligible

Material **making up the product:**

If the content of post-consumer recycled material incorporated (X%) is greater than the threshold (Y%), the IRM bonus is applicable over and above the threshold, i.e. at (X-Y)%. Otherwise, the bonus shall not apply.

*NB: the minimum threshold of post-consumer recycled plastic incorporated (by materials or products) is 70%.

IRM BONUS application criteria

IRM bonus calculation

The bonus calculation takes into account the quantity of products (in tonnes) eligible for the bonus according to your declaration and trigger thresholds.

x

=

Your bonus is then calculated based on the amounts of Ecomaison's IRM bonus.

x

=

At the end of each financial year N, during the 1st quarter of N+1, the bonuses are calculated, resulting in a payout*.

* As of Q3 2026. The incorporation of recycled materials in the second half of 2025 will be closed in the first half of 2026.

OVERVIEW OF SUPPORTING DOCUMENTS for eco-modulations

	 ECO-MODULATION	 BONUS • IRM
APPLICATION RULES	Upon declaration → Rates via the different codes	Upon declaration → Specific calculation and payment of a certain amount
SUPPORTING DOCUMENTS	Sustainable renewable resource management Sworn statement to be completed in the “Services” space Supporting documents to keep available in the event of an inspection (by way of example, non-exhaustive list): transaction documents: purchase invoices and/or delivery notes, recognised certificates and/or transaction certificates, detailed product data sheets (including composition details)	Documents to be forwarded → LNE incorporation certificates part 2: the certification must state the ratio/tonnage of post-consumer recycled raw material (RPM) by origin, as this is the only parameter taken into account (provided by the manufacturers). → RecyClass certificates (provided by the regenerators): the certificate must state the ratio/tonnage of post-consumer RPM, as this is the only parameter taken into account.
	Recyclability Use of the “Recyclability” tool Supporting documents	
	Extension of useful life Schedule of declaration to be completed in the “Services” spaces and Supporting documents to be uploaded to the “Services” space	

eco-MODULATION supporting documents

SUSTAINABLE RENEWABLE RESOURCE MANAGEMENT

Supporting documents will vary depending on the material. You must then **complete a sworn statement in the Ecomaison “Services” space** concerning the possession of the supporting documents listed below.

Wood

- **Product or building material labels and certifications**, according to the principles of the control chain for the labels and certifications concerned: PEFC, PEFC Recycled, FSC Mix or FSC Recycled.
- Or **any equivalent due diligence system** ensuring that the products come from sustainably managed forests and recycled and/or controlled sources.

eco-MODULATION supporting documents

RECYCLABILITY

Documents do not need to be uploaded to the Ecomaison “Services” space.

The supporting documents are available in the event of an inspection by Ecomaison:

› **Product sheets** stating the full composition of the product with the amounts of any hazardous materials and substances.

› **Results available in the [Ecomaison tool](#)** for recyclability analysis.

4 recyclability levels

eco-MODULATION supporting documents
