and data sheets

PRODUCTS concerned

CATEGORY 1 Inert materials

Concrete and mortar
or materials contributing
to their preparation

Lime

Limestone,
granite, sandstone
and volcanic rock

Terracotta
or raw earth

Slate

ecomaison

CATEGORY 2 Non-inert materials

Wood

Metal

Mortars, coatings,
paints, varnishes,
resins

Joinery with glazing,
glazed walls
and related building
products

Plaster

Plastics

Bitumen
membranes

Glass wool
Rockwool

Materials of plant
or animal origin
or other

The following are excluded from the regulatory scope:

- > Excavated land.
- > Products and materials of provisional use associated with the installation of building sites.
- > The structures and equipment inseparable from the process.
- > Products exclusively intended for public works.

A person with a beard, wearing a red and black plaid shirt, is sitting at a wooden workbench in a workshop. They are using a silver laptop. The workbench is cluttered with various items, including a stack of papers, a pen, and some wooden blocks. In the background, there are shelves with more papers and a green wall. The text "WHAT HAPPENS TO my eco-fee?" is overlaid on the bottom left of the image.

WHAT HAPPENS TO
my eco-fee?

WHAT HAPPENS TO my eco-fee?

The eco-fee allows Ecomaison to organise and **fund the collection** of building and housing products and materials, as well as **the repair, reuse and recycling** of sorted products.

Source: key figures 2024

PRICING IS CALCULATED BASED ON 3 CRITERIA:

› Product features

The rate depends on the product type, weight, materials used and the product's recyclability or recycling disruptors.

› Management costs

The rate reflects the real costs of the sector, including product collection, sorting, transportation and processing. The smaller the object, the more logistics required to collect it, resulting in higher costs.

› Eco-modulations

Bonuses and penalties may apply depending on eco-design criteria (extension of useful life, incorporation of recycled materials, recycling disruptors, etc.).

A hand wearing a light-colored work glove with dark patches on the palm and fingers is holding a thick stack of papers. The papers are slightly fanned out, showing their edges. The background is a soft, out-of-focus light brown.

calculating my eco-fee and **improving** my environmental performance

[All the info on eco-modulations](#)

[Rewarding my commitment](#)

what are eco-MODULATIONS?

- › Eco-modulations are a scheme provided by Ecomaison to **reward the circular efforts** of our most virtuous members.
- › By sourcing raw materials from renewable or recycled resources, extending product useful life and implementing a circular purchasing policy, you can **improve your eco-fee and/or benefit from bonuses**.
- › By adopting these practices, you can optimise your obligations, **make your business more circular and drive your industry's performance**.

My Ecomaison invoice

	Total
Eco-fee for initial market launch on French territory (new or second-hand)	€A
I owe Ecomaison	
Reduction of eco-fee due to eco-modulations	€B
My total eco-fee	A-B = €C
Bonuses for incorporating recycled materials	€D
Ecomaison owes me	
MY TOTAL CONTRIBUTION PAID	C-D = €E

How can I improve my contribution?

Sustainable management

Recyclability

Incorporation of recycled materials (IRM)

SUSTAINABLE resource management

The sustainable product management criterion relates to the material of which the product is made.

Sustainable management means that:

- › the product meets a minimum threshold concerning the amount of its materials sourced from **sustainably managed resources**;
- › the products or their constituent materials are **certified** or carry a corresponding label.

*NB: the sustainable management bonus is subject to the absence of recycling disruptors.

Eligible materials:

Wood

Bio-based materials

(materials based on fibres of plant or animal origin other than wood, wood derivatives and paperboard)

WE PROVIDE TOOLS:

To view the list of recycling disruptors, see the [dedicated page](#) (in French only).

WE PROVIDE SUPPORT:

The item code incorporates eco-modulation for sustainable management.
It's easy!

Levels of recyclability

Your product's recyclability depends on its constituent materials.

To benefit from this eco-modulation, you must take into account the materials used during the manufacture of the product.

A product composed mainly of inert materials, wood, metal or mono-resin plastics will entitle you to a **lower eco-fee, as it is more easily recyclable** than a product made from a combination of materials or multiple resins.

*NB: the recyclability bonus is subject to the absence of recycling disruptors.

4 Ecomaison recyclability levels

WE PROVIDE SUPPORT:

The item code incorporates the eco-modulation for recyclability **It's easy!**

TO FIND OUT

the recyclability of the products you launch onto the market, head to the corresponding [data sheets](#).

RECYCLABILITY LEVELS - for building products and materials

Metal, solid wood, glass, plaster, mono-resin plastics, glass wool, rockwool > 95%

Ferrous and non-ferrous metals > 95% Solid wood, all species, GLT (glulam), CLT, GST, laminated, veneered, plywood, strips

Metal, glazed joinery, interior joinery, plaster > 50% (metal, wood or PVC frame), (metal, wood, PVC), Panels > 90%

Chipboard, MDF/HDF and OSB Pergolas, windows, French windows, etc. Doors, door frames, door units, hatch units

Wood derivatives > 90%, Assembly of > 50% wood with other materials, Synthetic rubber > 95%, Synthetic materials or fibres > 95%, Plastics or synthetic materials > 50%, Assembly of synthetic materials or fibres > 50%, Bitumen membranes > 90%, Natural rubber > 95%, Paperboard > 50%

Composite, cellular
Composite wood + plastic or other non-majority materials

Paints, coatings, mortars, resins, varnish treatment products, adhesives, sealants, putties, additives > 50%, Assembly of glass wool or rockwool > 50%, Bio-based wools > 95%, Assembly of materials with no material > 50%

INCORPORATION of recycled materials (IRM)

Ecomaison rewards you for **incorporating recycled raw materials** into a product launched on the market⁽¹⁾.

This reward is calculated based on the amount of recycled materials incorporated into your product.

This concerns products containing the following materials⁽²⁾:

Plastics

Wood

PU foam

Metal

(1) A breakdown by material can be found in the [data sheets](#).

(2) The technical details of the materials concerned, recycling disruptors, minimum incorporation thresholds and the [list of hazardous or REACH-classified substances](#) can be found in the data sheets included in the appendices.

*NB: the minimum thresholds of post-consumer recycled materials incorporated (by materials or products) are indicated in the [data sheets](#) appended to the price guide.

These materials are eligible if they:

- **are exclusively sourced from end-of-life products** (post-consumer waste), from a holder listed with an approved eco-organisation in France;
- **do not contain** any substances that are hazardous or listed under REACH;
- reach a **set minimum threshold** (in %) of the product's material composition;
- fulfil the principle of proximity, meaning that the stages of collection, sorting, recycling and incorporation of **recycled materials are all carried out:**
 - within a 1,500 km radius of France's barycentre;
 - in an EU Member State.

These plastic products are not eligible if they:

- incorporate recycled plastic in a composite matrix, i.e. plastic resins associated with reinforcements forming a composite material with strengthened physical and mechanical properties;
- contain recycling disruptors identified by approved eco-organisations for the corresponding product category (2);
- contain less than 50% post-consumer recycled plastic incorporated into the finished product.

concrete example

Example of how the eco-design efforts proposed and rewarded by Ecomaison can improve your contribution.

For wood flooring made of > 90% chipboard

Unit rates - in €/tonne excl. tax

A close-up photograph showing a person's hand applying a thick, white adhesive substance to a piece of light-colored cardboard. The cardboard is being placed onto a surface made of oriented strand board (OSB), which has a visible wood chip texture. The adhesive is being spread along the edge of the cardboard. The image has rounded corners and a white background on the left side.

CODIFYING **products**

CODIFYING my products

ONE PRODUCT = ONE 11-DIGIT ITEM CODE

The item code allows you to apply the corresponding **eco-fee pricing scales** and to declare the launch of products subject to regulation.

SIMPLIFIED SYSTEM RATES (annual declaration)

WHO CAN BENEFIT?

Craftspeople, retailers and manufacturers **with an annual turnover of less than €1 million** for building-related products and materials that have not already been invoiced with an eco-fee.

Principle:

This declaration is calculated on the basis of a percentage (excluding tax) of their sales of products subject to ERP (Extended Producer Responsibility) for the previous calendar year.

This is a simplified system proposed by Ecomaison to make it easier for VSEs and SMEs to comply.

Membership is essential for the issuance of the Unique ID to be inserted in the GTCs and as proof of the company's compliance in the event of an inspection.

BASED ON 2025 BUILDING SALES OF LESS THAN €1M EXCLUDING TAX

Recycling disruptors

Incorporation of recycled
materials (IRM)

Sustainable
management criteria

Declarations

RECYCLING disruptors

These are elements or materials that prevent recycling.

There are 2 categories:

Chemical disruptors

Hazardous substances within the meaning of the AGEC Act (Art. 13), i.e.:

- Substances of “**very high concern**” within the meaning of the European REACH regulation, in a concentration above 0.1% weight by weight.
- Substances listed under Annex XVII to REACH in **quantities exceeding the established limit**.
- **Substances** subject to **the POPs regulation** (Appendix 4).

[READ MORE](#)

Physical disruptors

Materials or assembly methods that **do not allow the extraction of materials** or that **compromise the quality of the flow to be recycled**.

WE PROVIDE TOOLS:

Discover the list of disruptors to assess the recyclability of your products using the Ecomaison tool.

STATEMENT OF PRESENCE of hazardous substances

The obligation to display information on the presence of a hazardous substance applies when it is present in concentrations above 0.1% weight by weight in a substance, mixture or item, within the meaning of points 1, 2 and 3 of Article 3 of Regulation (EC) No. 1907/2006 known as REACH, as supplemented and updated by order of the Minister for the Environment.

Information on hazardous substances
can be displayed via:

- The product sheet.
- The [Scan4Chem](#) application.
This app is financed by the European Commission as part of the LIFE programme, in which France is actively involved through the French National Institute for Industrial Environment and Risks (INERIS).

The statement to be
displayed is as follows:

CONTAINS A HAZARDOUS SUBSTANCE

OR

**CONTAINS A SUBSTANCE
OF VERY HIGH CONCERN**

The statement is supplemented by the name
of each hazardous substance present.

Renewable Resources sustainable management criterion

1

product made in line with
sustainable resource management

=

1

product code to which
a modulated rate is automatically
applied when you declare

CONDITION:

This “**Sustainable Management**”
rate is applied in the absence
of physical or chemical recycling
disruptors, a list of which can
be found via [our recyclability
analysis tool](#).

Renewable Resources sustainable management criterion

SUSTAINABLE MANAGEMENT - WOOD

The “**Sustainable Management - Wood**” rate is applicable in accordance with the following conditions:

Solid wood and similar products

Minimum “Sustainable Management” wood content in the product:

Building: **70%**

Material

“Sustainable management” wood, i.e. derived from sustainably managed forests and certified:

- PEFC, FSC;
- or under any equivalent due diligence system

Wood-based panel products (PP, OSB)

Minimum “Sustainable Management” wood-based panel product content in the product:

Building: **70%**

Material

“Sustainable management” wood, i.e. derived from sustainably managed resources and certified:

- PEFC, PEFC Recycled, FSC Mix, FSC Recycled;
- or under any equivalent due diligence system

Labels & Certification

or equivalent

These labels and certifications are accepted to indicate the resource's sustainable management.

Renewable Resources sustainable management criterion

OTHER RENEWABLE RESOURCES

The “**Bio-Based Materials**” rate is applicable for building products and materials that are mainly made of materials and fibres of plant or animal origin other than wood, wood derivatives and paperboard.

IRM BONUS application criterion

Sources

The recycled material comes exclusively from post-consumer waste, i.e. end-of-life products.

It must:

- come from a holder/operator listed by a government-approved eco-organisation as part of the EPR strategy;
- have been collected, sorted, recycled and incorporated within 1,500 km of France's barycentre and/or in an EU Member State.

Quality

The recycled material must not compromise the future recyclability of the manufactured product.

It must not contain recycling disruptors beyond the established thresholds.

Quantity

Bonuses and eco-modulations are calculated according to the quantities of post-consumer recycled waste incorporated into the material making up the finished product.

IRM BONUS application criterion

ELIGIBLE VOLUME MINIMUM THRESHOLD

Bonuses are **calculated for the quantities of post-consumer recycled waste incorporated** into the material making up the finished product, for all tonnes exceeding a minimum incorporation threshold.

How to find out if my product is eligible

Material **making up the product**:

If the content of post-consumer recycled material incorporated (X%) is greater than the threshold (Y%), the IRM bonus is applicable over and above the threshold, i.e. at (X-Y)%. Otherwise, the bonus shall not apply.

Amounts and thresholds applicable for each of the products offered:

Material in the product	Unit amount €/t of recycled material incorporated into the product above the trigger threshold	Trigger threshold in the material	€/t unit amount of the material in the product once the integration rate is reached	Target rate of integration into the material
Wood in chipboard	€40/t	35%	-	-
Wood in MDF/HDF panels	€40/t	> 0%	-	-
PVC in windows ⁽¹⁾	€450/t	20%	-	-
PU foam in thermal or acoustic insulators	-	-	€50/t	70%
Metal in the rebar	-	-	€1.10/t	90%

(1) The PVC quantity taken into account in the calculation of the bonus corresponds to 30% of the total weight of the tonnes declared and commercialised.

IRM BONUS application criterion

IRM bonus calculation

The bonus calculation takes into account the quantity of products (in tonnes) eligible for the bonus according to your declaration and trigger thresholds.

**Quantities
(tonnes)
of eligible
products**

x

**% recycled
materials**

=

**Eligible
tonnes
recycled
materials**

Your bonus is then calculated based on the amounts of the Ecomaison IRM bonus.

**Eligible
tonnes
recycled
materials**

x

**Ecomaison
unit bonus
amounts**

=

**My bonus
paid by
Ecomaison**

At the end of each financial year N, during the 1st quarter of N+1, the bonuses are calculated, resulting in a payout*.

* As of Q3 2026. The incorporation of recycled materials in the second half of 2025 will be closed in the first half of 2026.

OVERVIEW OF SUPPORTING DOCUMENTS FOR eco-modulations and the IRM bonus

	 ECO-MODULATIONS • Sustainable management • Recyclability	 BONUS • IRM
APPLICATION RULES	Upon declaration → via the different codes	Upon declaration → Specific calculation and payment of a certain amount
SUPPORTING DOCUMENTS	Upon declaration → via the different codes Documents to be provided: → For manufacturers and distributors: - purchase certificates and invoices	Documents to be forwarded → For manufacturers: - specific certification of the recycled materials supplier (see Ecomaison list) - or certificate from the recycled material supplier - failing this, a certification obtained from a COFRAC-accredited certifying body → For distributors and importers: - specific certification of the manufacturers supplying the products (see Ecomaison list) - failing this, a certification obtained from a COFRAC-accredited certifying body The certifications or attestations must specify: - the origin of the eligible recycled material incorporated into the material or product - the content of this recycled material in the material (available for example: - for wood, in the FSC Recycled or FSC Mix certificates or any equivalent system; - for plastic, in the provisions of the NF EN 15343 standard).

*NB: at the date of publication of this guide, work on the material control and traceability chain carried out at the level of the OCAB (coordinating body of the building sector) was still underway.

eco-MODULATION

supporting documents

SUSTAINABLE RENEWABLE RESOURCE MANAGEMENT

Supporting documents will vary depending on the material. You must then **complete a sworn statement in the Ecomaison “Services” space** concerning the possession of the supporting documents listed below.

Wood

- **Product or building material labels and certifications**, according to the principles of the control chain for the labels and certifications concerned: PEFC, PEFC Recycled, FSC Mix or FSC Recycled.
- Or **any equivalent due diligence system** ensuring that the products come from sustainably managed forests and recycled and/or controlled sources.

Foams

- Sustainable management indicated by **labels similar to those used for wood** or equivalent systems
- Certification required:
- **polyurethane foam: CERTIPUR**
 - **latex foam: EUROLATEX**

Bio-based

- Product sheets stating the composition of materials and substances.

eco-MODULATION supporting documents

RECYCLABILITY

Documents do not need to be uploaded to the Ecomaison “Services” space. The supporting documents must be made available in the event of an inspection by Ecomaison:

- › **Product sheets** stating the full composition of the product with the amounts of any hazardous materials and substances.
- › **Results available in the [Ecomaison tool](#)** for recyclability analysis.

4 recyclability levels

HOW TO CALCULATE your marketing revenue

The revenue concerned corresponds to the manufacture of a product or material for use in the building industry **that has not already been invoiced with an eco-fee.**

It is made up of two main components:

- **Purchases of raw materials, processed for implementation or into finished products;**
- **Manufacturing, installation or any other service related to the use of these elements on building sites.**

On this basis, you calculate building marketing revenue (Y), after first determining the ratio of purchases without eco-fee:

$$Y (\text{€}) = X(\%) \times A \quad \left| \quad X = C \div B$$

TOTAL TURNOVER **A**
TOTAL PURCHASES **B**
NON-ECO-FEE PURCHASES **C**

Example:

You are a joiner

- Your total turnover **A = €1,329,000 excl. tax**
- Your total purchases represent (with and without eco-fee) **B = €578,000 excl. tax**
- Your purchases without eco-fee represent **C = €120,000 excl. tax**

$$X = 120,000 \div 578,000 = 0.207 \text{ or, as a percentage} = 20.7\%$$

$$Y (\text{€}) = 20.7(\%) \times 1,329,000$$

$$Y (\text{€}) = \text{€}275,103$$

Therefore, **€275,103 (Y)** is used as the basis of declaration for the application of the % detailed in the table on page 31.

$$Y \times 0.12\% = \text{amount of eco-fee to be paid} = \text{€}330 \text{ excl. tax}$$
