# PRODUCTS concerned

## CATEGORY 1 Inert materials

Concrete and mortar  
or materials contributing  
to their preparation

Lime

Limestone,  
granite, sandstone  
and volcanic rock

Terracotta  
or raw earth

Slate

ecomaison

## CATEGORY 2 Non-inert materials

Wood

Metal

Mortars, coatings,  
paints, varnishes,  
resins

Joinery with glazing,  
glazed walls  
and related building  
products

Plaster

Plastics

Bitumen  
membranes

Glass wool  
Rockwool

Materials of plant  
or animal origin  
or other

### The following are excluded from the regulatory scope:

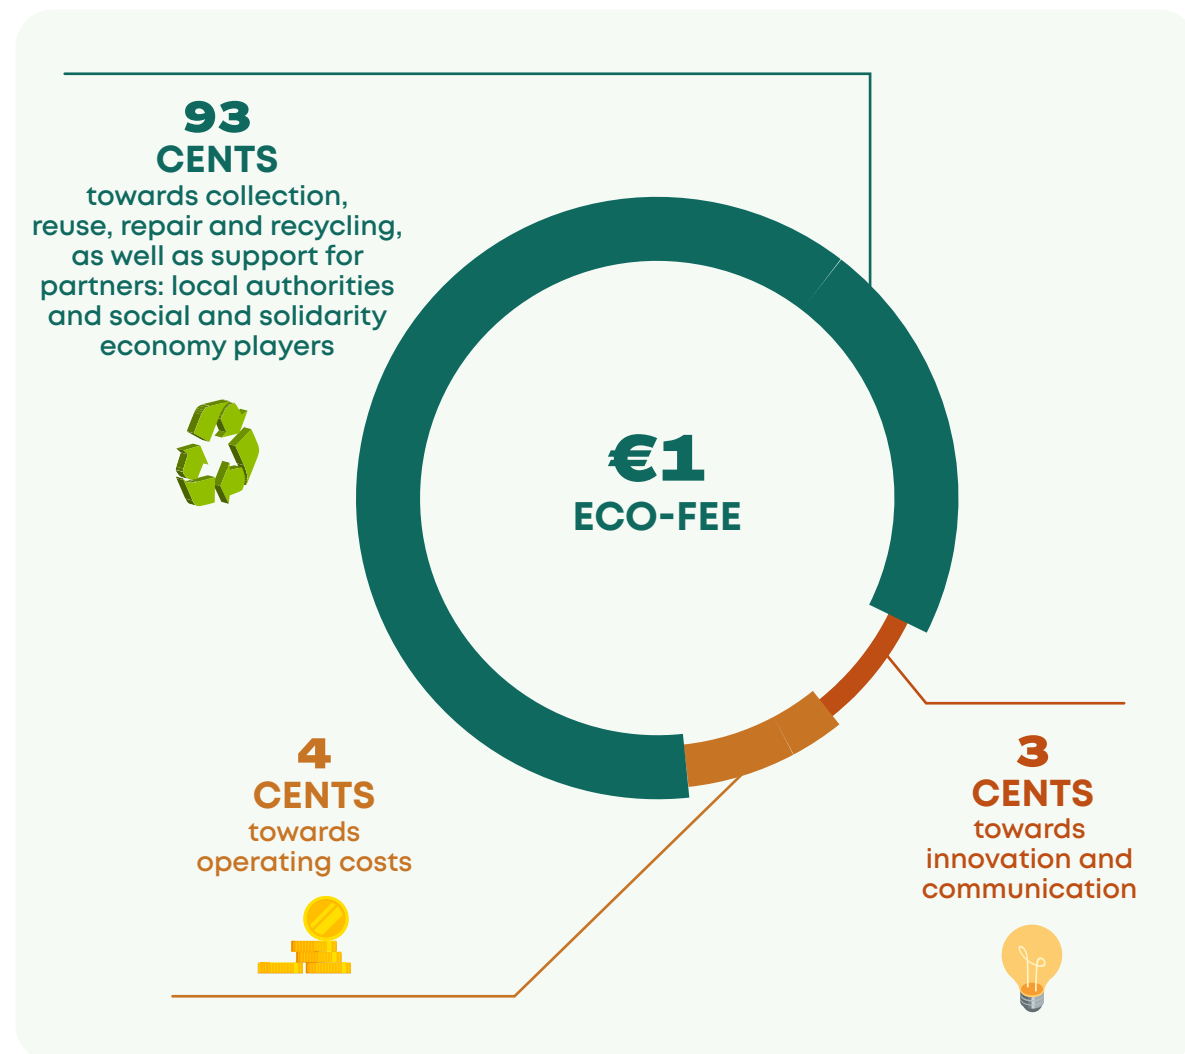

- > Excavated land.
- > Products and materials of provisional use associated with the installation of building sites.
- > The structures and equipment inseparable from the process.
- > Products exclusively intended for public works.

A person with a beard, wearing a red and black plaid shirt, is sitting at a wooden desk in a workshop. They are using a silver laptop. The desk is cluttered with papers and a large sheet of paper. In the background, there are shelves with various items, including what looks like a stack of wood or paper. The lighting is warm and focused on the person and their work.

**WHAT HAPPENS TO  
my eco-fee?**

# WHAT HAPPENS TO my eco-fee?

The eco-fee allows Ecomaison to organise and **fund the collection** of building and housing products and materials, as well as **the repair, reuse and recycling** of sorted products.

Source: key figures 2024

## PRICING IS CALCULATED BASED ON 3 CRITERIA:

### › Product features

The rate depends on the product type, weight, materials used and the product's recyclability or recycling disruptors.

### › Management costs

The rate reflects the real costs of the sector, including product collection, sorting, transportation and processing. The smaller the object, the more logistics required to collect it, resulting in higher costs.

### › Eco-modulations

Bonuses and penalties may apply depending on eco-design criteria (extension of useful life, incorporation of recycled materials, recycling disruptors, etc.).

A hand wearing a light-colored work glove is holding a stack of papers. The background is a blurred, warm-toned setting, possibly a library or office. The text is overlaid on the right side of the image.

# **Calculating** my eco-fee and **improving** my environmental performance

All the info on eco-modulations

Rewarding my commitment

# what are eco-MODULATIONS?

- › Eco-modulations are a scheme provided by Ecomaison to **reward the circular efforts** of our most virtuous members.
- › By sourcing raw materials from renewable or recycled resources, extending product useful life and implementing a circular purchasing policy, you can **improve your eco-fee and/or benefit from bonuses**.
- › By adopting these practices, you can optimise your obligations, **make your business more circular and drive your industry's performance**.

## My Ecomaison invoice

	Total
Eco-fee for initial market launch on French territory (new or second-hand) <b>I owe Ecomaison</b>	€A
Reduction of eco-fee due to eco-modulations	€B
<b>My total eco-fee</b>	<b>A-B = €C</b>
Bonuses for incorporating recycled materials <b>Ecomaison owes me</b>	€D
<b>MY TOTAL CONTRIBUTION PAID</b>	<b>C-D = €E</b>

## How can I improve my contribution?

# SUSTAINABLE resource management

The sustainable product management criterion relates to the material of which the product is made.

Sustainable management means that:

- › the product meets a minimum threshold concerning the amount of its materials sourced from **sustainably managed resources**;
- › the products or their constituent materials are **certified** or carry a corresponding label.

\*NB: the sustainable management bonus is subject to the absence of recycling disruptors.

## Eligible materials:

Wood

### Bio-based materials

(materials based on fibres of plant or animal origin other than wood, wood derivatives and paperboard)

### WE PROVIDE TOOLS:

To view the list of recycling disruptors, see the [dedicated page](#) (in French only).

### WE PROVIDE SUPPORT:

The item code incorporates eco-modulation for sustainable management.

**It's easy!**

# RECYCLABILITY

The recyclability of a product is established according to **5 cumulative criteria** depending on either the sector (eco-organisation's responsibility) or the product (manufacturer's responsibility) (according to [Article 13 of the AGECE Law](#)):

Sector dependent

## 1

The possibility of efficient **collection** on a regional scale via public access to local collection points.

## 2

The possibility of **sorting**, i.e. being directed to recycling channels to be recycled.

## 3

**The absence** of elements or substances in the material, product or packaging that **disrupt sorting** or recycling, or limit the use of the recycled material.

Product dependent

## 4

The product is recyclable only if, after treatment, **at least 50% of its initial mass can actually become a usable material again.**

Sector dependent

## 5

The possibility of **recycling on an industrial scale** and in practice, in particular through a guarantee that the quality of the recycled material obtained is sufficient to guarantee **long-term use and that the recycling sector** can demonstrate a good **capacity to handle** the products that can be integrated into it.

### WE PROVIDE TOOLS:

Discover the [list of disruptors](#).

To support your eco-design efforts, Ecomaison has designed a [material recyclability scale](#).

# Levels of recyclability

Your product's recyclability depends on its constituent materials.

To benefit from this eco-modulation, you must take into account the materials used during the manufacture of the product.

A product composed mainly of inert materials, wood, metal or mono-resin plastics will entitle you to a **lower eco-fee, as it is more easily recyclable** than a product made from a combination of materials or multiple resins.

\*NB: the recyclability bonus is subject to the absence of recycling disruptors.

## 4 Ecomaison recyclability levels

### WE PROVIDE SUPPORT:

The item code incorporates the eco-modulation for recyclability **It's easy!**

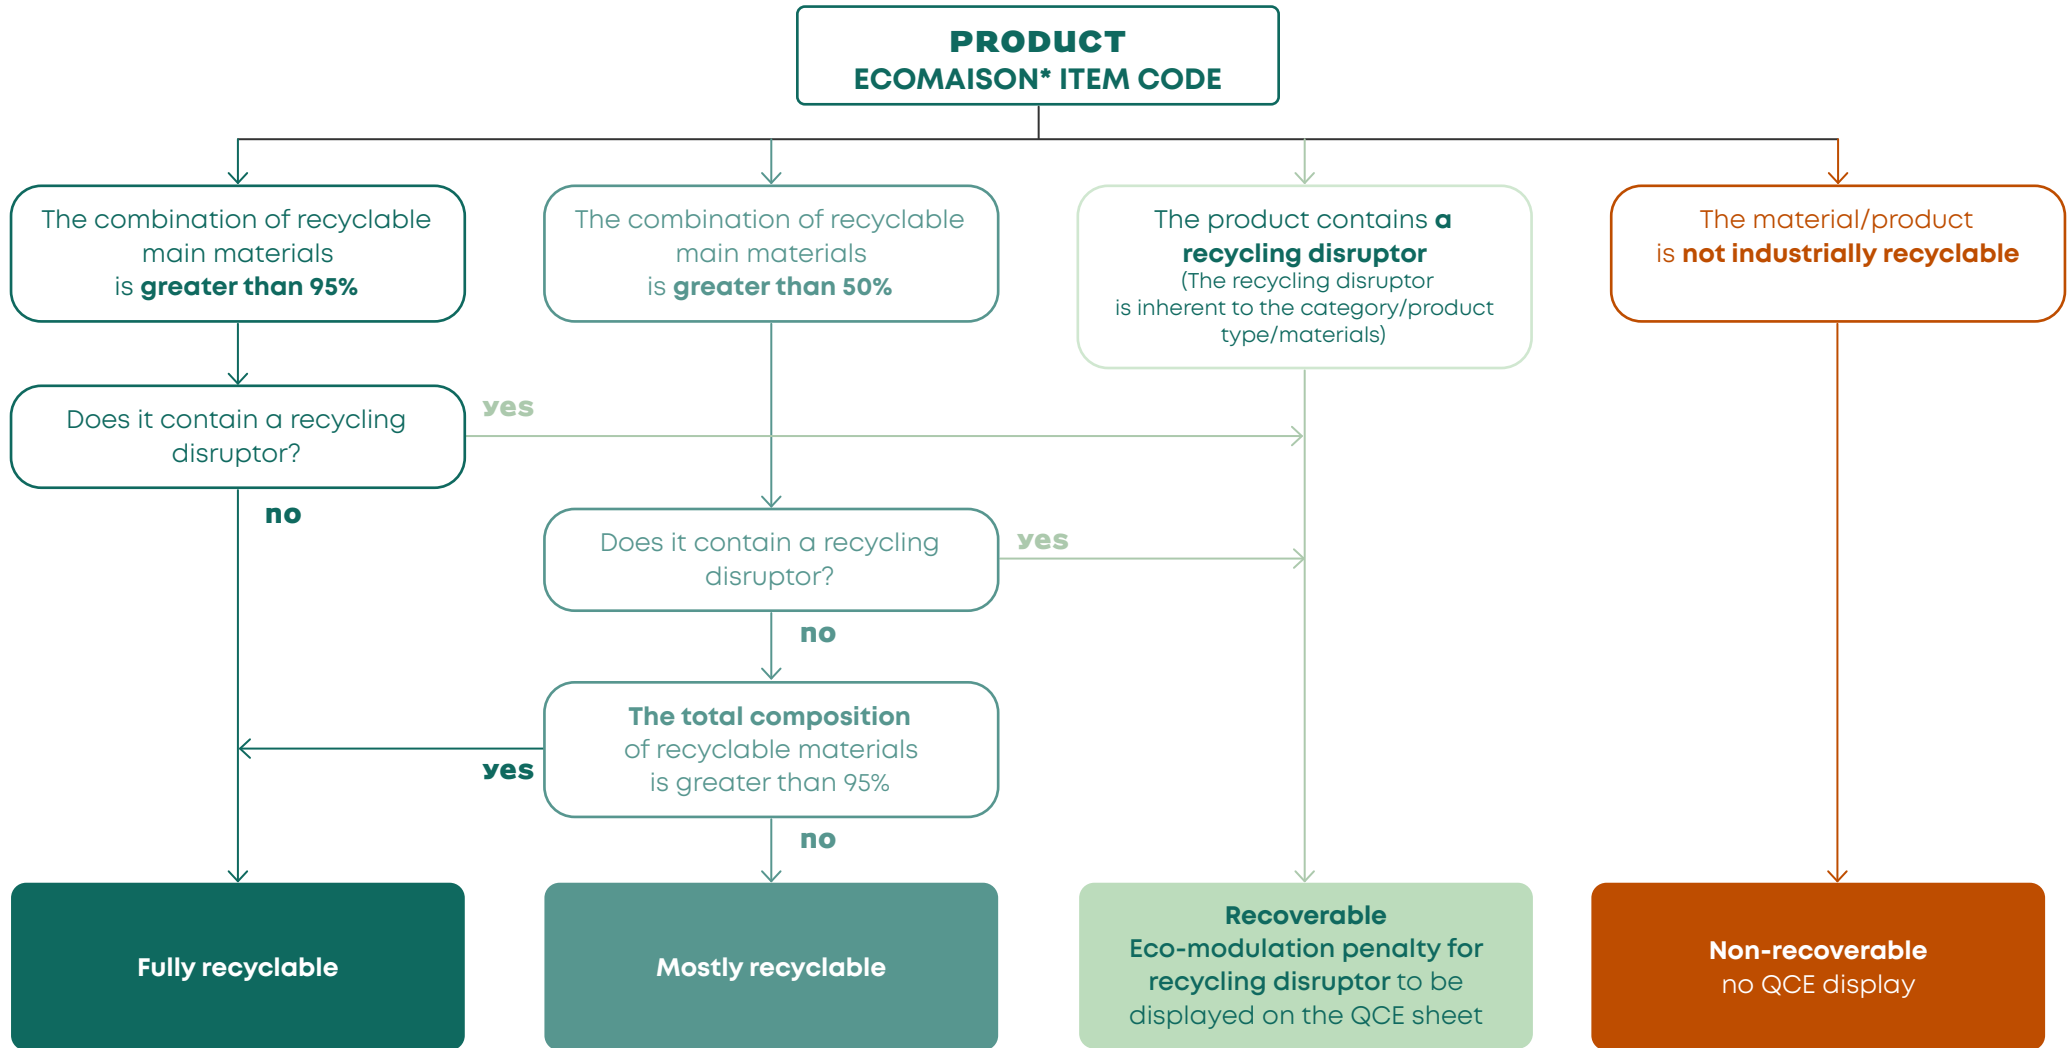

### TO FIND OUT

the recyclability of the products you launch onto the market, head to the corresponding [on the dedicated page](#).

To view the list of recyclable materials, consult the [technical data sheet](#).

# DEFINITION OF the level of recyclability

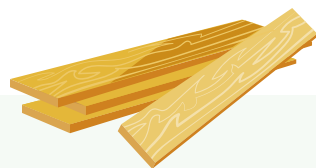

To help you determine the recyclability of your products, **Ecomaison provides a calculation tool** based on eco-fee codification according to the following reasoning:

**\*The Ecomaison item code contains the following information:**

- Product category;
- Type;
- Main material;
- Product weight.

# RECYCLABILITY LEVELS - for building products and materials

**Metal, solid wood, glass, plaster, mono-resin plastics, glass wool, rockwool** > 95%

Ferrous and non-ferrous metals > 95% Solid wood, all species, GLT (glulam), CLT, GST, laminated, veneered, plywood, strips

**Metal, glazed joinery, interior joinery, plaster** > 50% (metal, wood or PVC frame), (metal, wood, PVC), **Panels** > 90%

Chipboard, MDF/HDF and OSB Pergolas, windows, French windows, etc. Doors, door frames, door units, hatch units

**Wood derivatives** > 90%, **Assembly** of > 50% wood with other materials, **Synthetic rubber** > 95%, **Synthetic materials or fibres** > 95%, **Plastics or synthetic materials** > 50%, **Assembly of synthetic materials or fibres** > 50%, **polyurethane (PU)** > 95%, **Bitumen membranes** > 90%, **Natural rubber** > 95%, **Paperboard** > 50%

Composite, cellular  
Composite wood + plastic or other non-majority materials

**Paints, coatings, mortars, resins, varnish treatment products, adhesives, sealants, putties, additives** > 50%, **Assembly of glass wool or rockwool** > 50%, **Bio-based wools** > 95%, **Assembly of materials with no material** > 50%

# INCORPORATION of recycled materials (IRM)

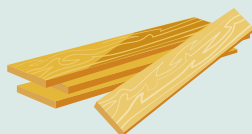

Ecomaison rewards you for **incorporating recycled raw materials** into a product launched on the market<sup>(1)</sup>.

This reward is calculated based on the amount of recycled materials incorporated into your product.

This concerns products containing the following materials<sup>(2)</sup>:

Plastics

Wood

PU foam / Latex

Metal

(1) A breakdown by material can be found in the [data sheets](#).

(2) The technical details of the materials concerned, recycling disruptors, minimum incorporation thresholds and the [list of hazardous or REACH-classified substances](#) can be found in the data sheets included in the appendices.

\*NB: the minimum thresholds of post-consumer recycled materials incorporated (by materials or products) are indicated in the [data sheets](#) appended to the price guide.

These materials  
are eligible if they:

- are **exclusively sourced from end-of-life products** (post-consumer waste), from a holder listed with an approved eco-organisation in France;
- **do not contain** any substances that are hazardous or listed under REACH;
- reach a **set minimum threshold** (in %) of the product's material composition;
- fulfil the principle of proximity, meaning that the stages of collection, sorting, recycling and incorporation of **recycled materials are all carried out:**
  - within a 1,500 km radius of France's barycentre;
  - in an EU Member State.

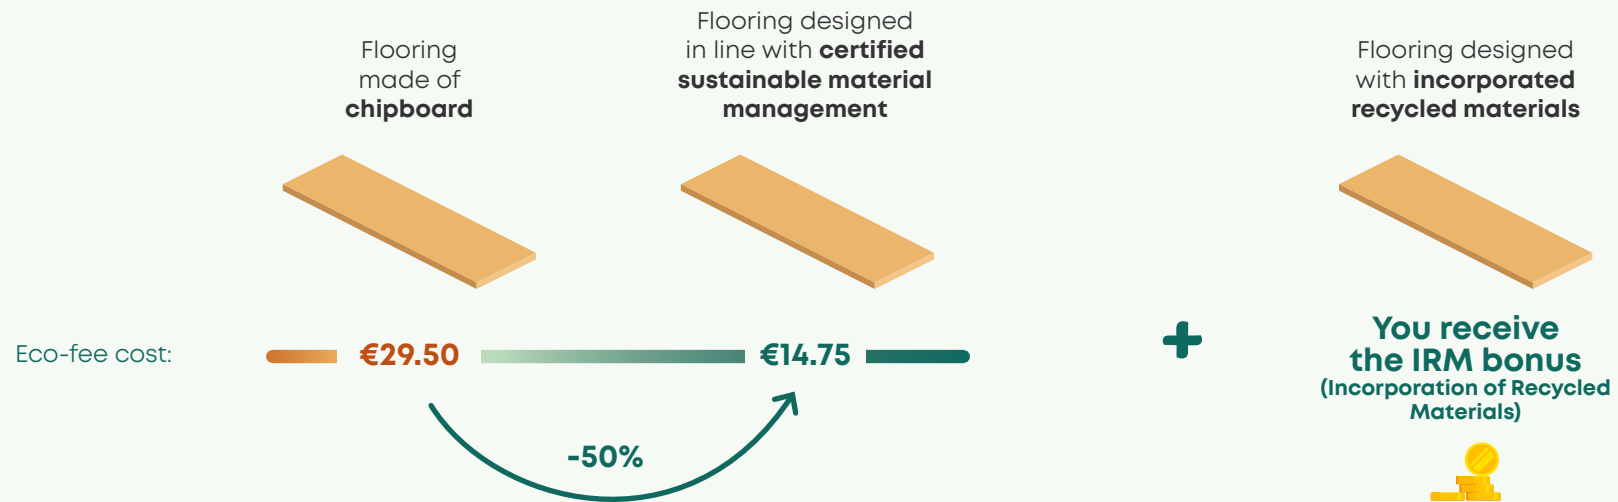

These plastic products  
are not eligible if they:

- incorporate recycled plastic in a composite matrix, i.e. plastic resins associated with reinforcements forming a composite material with strengthened physical and mechanical properties;
- contain recycling disruptors identified by approved eco-organisations for the corresponding product category (2);
- contain less than 50% post-consumer recycled plastic incorporated into the finished product.

# concrete EXAMPLE

Example of how the eco-design efforts proposed and rewarded by Ecomaison can improve your contribution.

For wood flooring made of > 90% chipboard

Unit rates - in €/tonne excl. tax

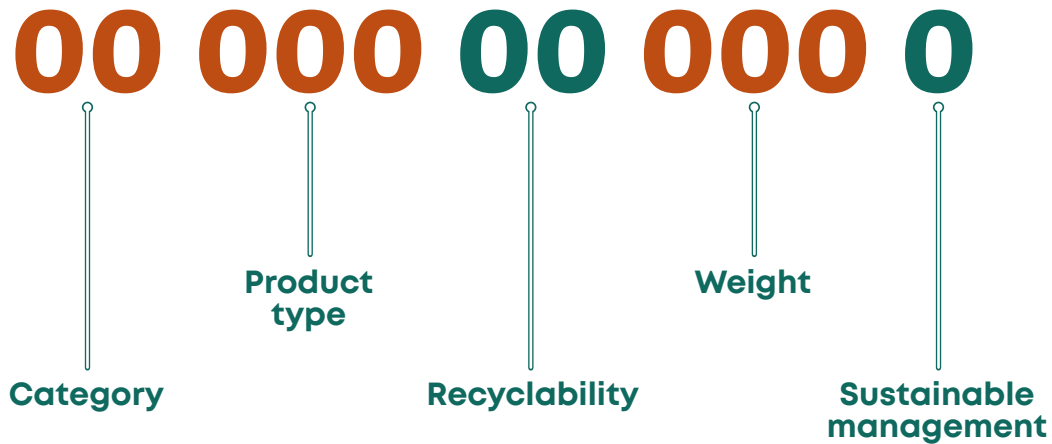

A close-up photograph showing a person's hand applying a thick, white adhesive to a piece of corrugated cardboard. The cardboard is being laid on a surface of oriented strand board (OSB). The adhesive is being spread across the top surface of the cardboard. The text 'CODIFYING products' is overlaid on the image in a bold, sans-serif font. 'CODIFYING' is in orange and 'products' is in teal.

**CODIFYING**  
**products**

# CODIFYING my products

ONE PRODUCT = ONE 11-DIGIT ITEM CODE

The item code allows you to apply the corresponding **eco-fee pricing scales** and to declare the launch of products subject to regulation.

Masonry fences and plot protection elements								-
Swimming pools and pool accessories			€34.30		€88.00		-	-

### GLOSSARY:

t = tonne

## PAINTS, COATINGS AND MORTARS

Rates in € (excl. tax)

Only products not covered by the Specific Diffuse Waste (SDW) channel

PRODUCTS/MATERIALS	€/t
Undercoats, floor preparations and sealing elements <sup>(1)</sup>	€55.00
Exterior paints <sup>(1)</sup>	€71.00
Treatments for floors and roofs <sup>(2)</sup>	€12.00
Interior paints <sup>(1)</sup>	€71.00
Glues and adhesives <sup>(3)</sup>	€29.00
PU and expansive resins (aerosols) <sup>(4)</sup>	€40.00
PU sealants, seals and foams <sup>(5)</sup>	€13.00
Additives <sup>(1)</sup>	€29.00
Treatments for wood <sup>(1)</sup>	€76.00
Material treatment (aerosol) <sup>(4)</sup>	€41.00
Treatments for non-wood materials <sup>(1)</sup>	€9.00
Varnishes, sealers and derivatives <sup>(1)</sup>	€70.00
Varnishes, sealers and derivatives (aerosols) <sup>(4)</sup>	€41.00
Powder coatings <sup>(6)</sup>	€2.00
Paste coatings <sup>(6)</sup>	€5.00

(1) > 25 litres or 30 kg

(2) > 2.5 litres

(3) > 25 kg or DIY glues > 5 kg if liquid or > 1 kg if solvent

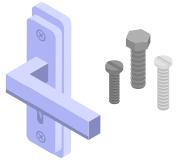

(4) aerosol > 1 litre; other packaging > 25 litres or 30 kg

(5) > 5 kg or cartridges > 0.3 litres

(6) > 25 kg

### GLOSSARY:

t = tonne

## BUILDING HARDWARE

Rates in € (excl. tax)

PRODUCTS/MATERIALS	METAL		WOOD		PLASTIC	
	> 95% METAL		> 50% ASSEMBLY		> 50% PLASTIC ASSEMBLY	
	€/unit batch < 5 kg	€/t	€/unit batch < 1 kg	€/t	€/unit batch < 300 g	€/t
Hardware	€0.04	€15.00	€0.05	€53.20	€0.03	€88.00

**Please note:** 1 ct codes are also available for hardware by the unit or by batch for all families of building products and materials.

# SIMPLIFIED SYSTEM RATES (annual declaration)

## WHO CAN BENEFIT?

Craftspeople, retailers and manufacturers **with an annual turnover of less than €2 million** for building-related products and materials that have not already been invoiced with an eco-fee.

## Principle:

This declaration is calculated on the basis of a percentage (excluding tax) of their sales of products subject to ERP (Extended Producer Responsibility) for the previous calendar year.

This is a simplified system proposed by Ecomaison to make it easier for VSEs and SMEs to comply.

Membership is essential for the issuance of the Unique ID to be inserted in the GTCs and as proof of the company's compliance in the event of an inspection.

BASED ON 2025 BUILDING SALES OF LESS THAN €2M EXCLUDING TAX	
ACTIVITIES	PERCENTAGE TO BE APPLIED ACCORDING TO MAIN ACTIVITY
Metalwork & Locks	0.01%
Framework / Flooring / Interior & exterior joinery	0.12%
Roofing	0.15%
Partition & Insulation	
Electricity / Plumbing / Heating	
Paint / Wall covering / Surface treatment	
Other construction tasks (masonry, earthworks, tiling)	

### WE PROVIDE TOOLS:

To find the calculation method for your marketing revenue, see the [data sheet](#).

# APPENDICES and data sheets

Recycling disruptors

Incorporation of recycled materials (IRM)

Sustainable management criteria

Declarations

# RECYCLABLE materials

## WOOD AND DERIVATIVES

- Wood derivatives >90%.
- Solid and equivalents >95%.
- Solid and equivalents >95% - Fresh wood.
- Solid and equivalents >95% - Dry wood.
- Solid and equivalents >95% - Dry and planed wood.
- MDF >90%.
- OSB >90%.
- Chipboard or OSB >90%.

## WOOLS

- Glass wool >95%.
- Rockwool >95%.

## metALS

- Assembly with >50% metal and other materials.
- Metal >95%.

## PLASTICS

- ABS >95%.
- PE or PP or PP/PE mixture >95%.
- Plastics (mono-resin) >95%.
- Plastics or other synthetic materials >50%.
- Polystyrene >95%.
- Polyethylene terephthalate (PET) >95%.
- PVC >95%.

## PLASTER

- Plaster >95%.

## GLASS

- Glass assembly >50% with wood or wood derivatives.
- Glass assembly >50% with metal.
- Glass assembly >50% with plastic.
- Glass >95%.

# RECYCLING disruptors

These are elements or materials that prevent recycling.  
**There are 2 categories:**

## Chemical disruptors

Hazardous substances within the meaning of the AGEC Act (Art. 13), i.e.:

- › Substances of “**very high concern**” within the meaning of the European REACH regulation, in a concentration above 0.1% weight by weight.
- › Substances listed under Annex XVII to REACH in **quantities exceeding the established limit**.
- › **Substances** subject to **the POPs regulation** (Appendix 4).

[READ MORE](#)

## Physical disruptors

Materials or assembly methods that **do not allow the extraction of materials** or that **compromise the quality of the flow to be recycled**.

### WE PROVIDE TOOLS:

Discover the list of disruptors to assess the recyclability of your products using the [Ecomaison tool](#).

# DISRUPTORS to the recycling of Building Products and Materials

RECYCLING DISRUPTOR	FACTORS THAT DISRUPT RECYCLABILITY (Wood and derivatives, metals, foam, spring and latex, paper, cardboard, plastics)	NON-EXHAUSTIVE PRODUCT EXAMPLES
<p><b>Disruptive chemicals (SVHCs)*</b></p>	<p>Brominated flame retardants (PBDE, HBCD), adhesives containing solvents or epoxy resins, chemical surface treatments... <b>in all building product families.</b> Examples: insulating wool, wall coverings, plasterboard.</p>	 <p>Insulating wool</p>
<p><b>Integrated electrical/ electronic components that are difficult to separate using standard user tools</b></p>	<p>Built-in LEDs, motors or air quality sensors that are difficult to separate from <b>a mostly recyclable material.</b> Examples: smart floor slab, ceiling panel with built-in LEDs.</p>	 <p>Air conditioning</p>
<p><b>Included inert mineral materials that are difficult to separate using standard user tools</b></p>	<p>Inert materials and minerals incorporated into building products whose <b>main material is recyclable.</b> Examples: composite partitions and wall slabs, decorative panels (wood and stone).</p>	 <p>Composite partition</p>

\*SVHC (Substance of Very High Concern) within the meaning of the European REACH regulation.

# DISRUPTORS to the recycling of Building Products and Materials

## RECYCLING DISRUPTOR

**FACTORS THAT DISRUPT RECYCLABILITY**  
(Wood and derivatives, metals, foam, spring and latex, paper, cardboard, plastics)

## NON-EXHAUSTIVE PRODUCT EXAMPLES

Sector dependent

**Foams or textiles incorporated into the structure in a complex way**

Complex chemical or mechanical incorporation of foams and textiles into building products whose main material is recyclable.  
Example: textile wall coverings.

Carpets

**High mineral filler content (>40% fillers weight by weight)**

Mineral fillers incorporated to >40% by weight of the product for reasons of stiffness, stability or fire resistance in building products whose main material is recyclable: **plastic resins, wood and wood derivatives, etc.**  
Examples: plastic wall coverings, heavy plastic baseboards, shower cubicles.

Shower cubicle

Product dependent

**Complex polymers (cross-linked, woven, reinforced, composite)**

Polymers: cross-linked, woven or reinforced to impart specific properties to the products.  
Examples: multilayer laminated pool liners, reinforced facade panels, woven kitchen pipes.

Pool liner

# STATEMENT OF PRESENCE of hazardous substances

The obligation to display information on the presence of a hazardous substance applies when it is present in concentrations above 0.1% weight by weight in a substance, mixture or item, within the meaning of points 1, 2 and 3 of Article 3 of Regulation (EC) No. 1907/2006 known as REACH, as supplemented and updated by order of the Minister for the Environment.

Information on hazardous substances  
**can be displayed via:**

- The product sheet.
- The [Scan4Chem](#) application.  
This app is financed by the European Commission as part of the LIFE programme, in which France is actively involved through the French National Institute for Industrial Environment and Risks (INERIS).

The statement to be  
displayed is as follows:

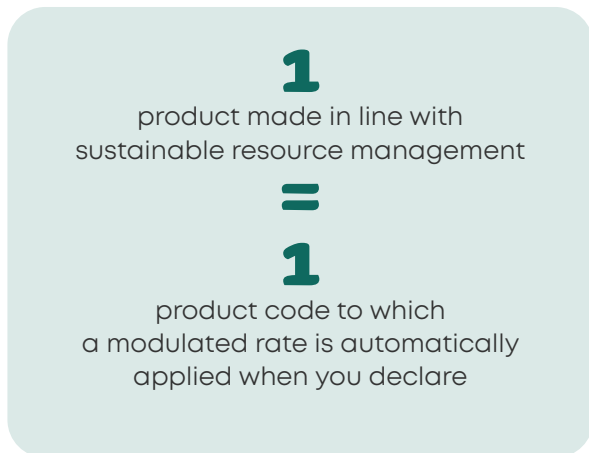

**CONTAINS A HAZARDOUS SUBSTANCE**

**OR**

**CONTAINS A SUBSTANCE  
OF VERY HIGH CONCERN**

The statement is supplemented by the name  
of each hazardous substance present.

# Renewable Resources sustainable management criterion

## CONDITION:

This “**Sustainable Management**” rate is applied in the absence of physical or chemical recycling disruptors, a list of which can be found via [our recyclability analysis tool](#).

# Renewable Resources sustainable management criterion

## SUSTAINABLE MANAGEMENT - WOOD

The “Sustainable Management - Wood” rate is applicable in accordance with the following conditions:

### Solid wood and similar products

Minimum “Sustainable Management” wood content in the product:

Building: **70%**

#### Material

“Sustainable management” wood, i.e. derived from sustainably managed forests and certified:

- PEFC, FSC;
- or under any equivalent due diligence system

### Wood-based panel products (PP, OSB)

Minimum “Sustainable Management” wood-based panel product content in the product:

Building: **70%**

#### Material

“Sustainable management” wood, i.e. derived from sustainably managed resources and certified:

- PEFC, PEFC Recycled, FSC Mix, FSC Recycled;
- or under any equivalent due diligence system

## Labels & Certification

or equivalent

These labels and certifications are accepted to indicate the resource’s sustainable management.

# Renewable Resources sustainable management criterion

## OTHER RENEWABLE RESOURCES

The “**Bio-Based Materials**” rate is applicable for building products and materials that are mainly made of materials and fibres of plant or animal origin other than wood, wood derivatives and paperboard.

# IRM BONUS application criterion

## Sources

The recycled material comes exclusively from post-consumer waste, i.e. end-of-life products.

It must:

- come from a holder/operator listed by a government-approved eco-organisation as part of the EPR strategy;
- have been collected, sorted, recycled and incorporated within 1,500 km of France's barycentre and/or in an EU Member State.

## Quality

The recycled material must not compromise the future recyclability of the manufactured product.

It must not contain recycling disruptors beyond the established thresholds.

## Quantity

Bonuses and eco-modulations are calculated according to the quantities of post-consumer recycled waste incorporated into the material making up the finished product.

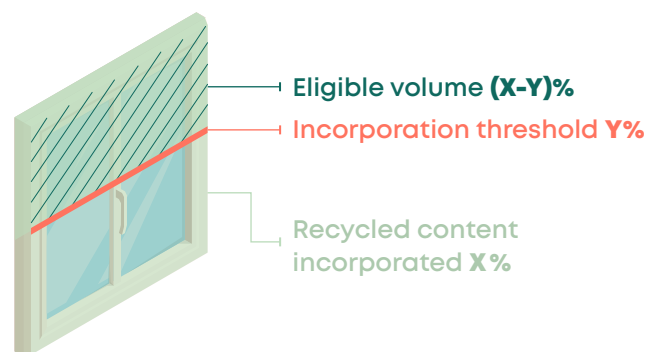

# IRM BONUS application criterion

## ELIGIBLE VOLUME MINIMUM THRESHOLD

Bonuses are **calculated for the quantities of post-consumer recycled waste incorporated** into the material making up the finished product, for all tonnes exceeding a minimum incorporation threshold.

### How to find out if my product is eligible

Material **making up the product:**

If the content of post-consumer recycled material incorporated (X%) is greater than the threshold (Y%), the IRM bonus is applicable over and above the threshold, i.e. at (X-Y)%. Otherwise, the bonus shall not apply.

**Amounts and thresholds** applicable for each of the products offered:

Material in the product	Unit amount €/t of recycled material incorporated into the product above the trigger threshold	Trigger threshold in the material	€/t unit amount of the material in the product once the integration rate is reached	Target rate of integration into the material
Wood in chipboard	€40/t	35%	-	-
Wood in MDF/HDF panels	€40/t	> 0%	-	-
PVC in windows <sup>(1)</sup>	€450/t	20%	-	-
PU foam in thermal or acoustic insulators	-	-	€50/t	70%
Metal in the rebar	-	-	€1.10/t	90%

(1) The PVC quantity taken into account in the calculation of the bonus corresponds to 30% of the total weight of the tonnes declared and commercialised.

# IRM BONUS application criterion

## IRM bonus calculation

The bonus calculation takes into account the quantity of products (in tonnes) eligible for the bonus according to your declaration and trigger thresholds.

**Quantities  
(tonnes)  
of eligible  
products**

x

**% recycled  
materials**

=

**Eligible  
tonnes  
recycled  
materials**

Your bonus is then calculated based on the amounts of the Ecomaison IRM bonus.

**Eligible  
tonnes  
recycled  
materials**

x

**Ecomaison  
unit bonus  
amounts**

=

**My bonus  
paid by  
Ecomaison**

At the end of each financial year N, during the 1<sup>st</sup> quarter of N+1, the bonuses are calculated, resulting in a payout\*.

\* As of Q3 2026. The incorporation of recycled materials in the second half of 2025 will be closed in the first half of 2026.

# OVERVIEW OF SUPPORTING DOCUMENTS FOR eco-modulations and the IRM bonus

	 <p><b>ECO-MODULATIONS</b></p> <ul style="list-style-type: none"> <li>• Sustainable management</li> <li>• Recyclability</li> </ul>	 <p><b>BONUS</b></p> <ul style="list-style-type: none"> <li>• IRM</li> </ul>
<b>APPLICATION RULES</b>	<p><b>Upon declaration</b></p> <p>→ via the different codes</p>	<p><b>Upon declaration</b></p> <p>→ Specific calculation and payment of a certain amount</p>
<b>SUPPORTING DOCUMENTS</b>	<p><b>Upon declaration</b></p> <p>→ via the different codes</p> <p><b>Documents to be provided:</b></p> <p>→ For manufacturers and distributors:</p> <ul style="list-style-type: none"> <li>- purchase certificates and invoices</li> </ul>	<p><b>Documents to be forwarded</b></p> <p>→ For manufacturers:</p> <ul style="list-style-type: none"> <li>- specific certification of the recycled materials supplier (see Ecomaison list)</li> <li>- or certificate from the recycled material supplier</li> <li>- failing this, a certification obtained from a COFRAC-accredited certifying body</li> </ul> <p>→ For distributors and importers:</p> <ul style="list-style-type: none"> <li>- specific certification of the manufacturers supplying the products (see Ecomaison list)</li> <li>- failing this, a certification obtained from a COFRAC-accredited certifying body</li> </ul> <p>The certifications or attestations must specify:</p> <ul style="list-style-type: none"> <li>- the origin of the eligible recycled material incorporated into the material or product</li> <li>- the content of this recycled material in the material (available for example: <ul style="list-style-type: none"> <li>- for wood, in the FSC Recycled or FSC Mix certificates or any equivalent system;</li> <li>- for plastic, in the provisions of the NF EN 15343 standard).</li> </ul> </li> </ul>

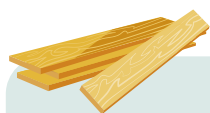

\*NB: at the date of publication of this guide, work on the material control and traceability chain carried out at the level of the OCAB (coordinating body of the building sector) was still underway.

# eco-MODULATION supporting documents

## SUSTAINABLE RENEWABLE RESOURCE MANAGEMENT

Supporting documents will vary depending on the material. You must then **complete a sworn statement in the Ecomaison “Services” space** concerning the possession of the supporting documents listed below.

### Wood

- **Product or building material labels and certifications**, according to the principles of the control chain for the labels and certifications concerned: PEFC, PEFC Recycled, FSC Mix or FSC Recycled.
- Or **any equivalent due diligence system** ensuring that the products come from sustainably managed forests and recycled and/or controlled sources.

### Foams

- Sustainable management indicated by **labels similar to those used for wood** or equivalent systems
- Certification required:
- **polyurethane foam: CERTIPUR**
  - **latex foam: EUROLATEX**

### Bio-based

- Product sheets stating the composition of materials and substances.

# eco-MODULATION supporting documents

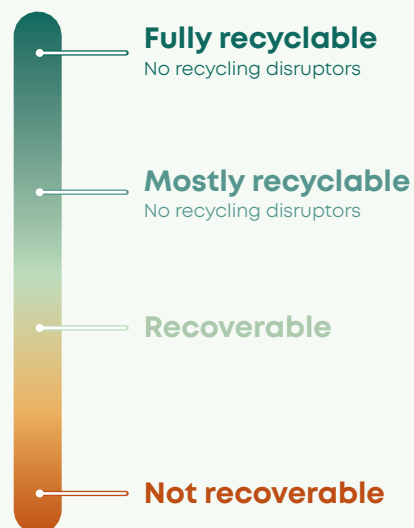

## RECYCLABILITY

Documents do not need to be uploaded to the Ecomaison “Services” space. The supporting documents must be made available in the event of an inspection by Ecomaison:

- › **Product sheets** stating the full composition of the product with the amounts of any hazardous materials and substances.
- › **Results available in the [Ecomaison tool](#)** for recyclability analysis.

## 4 recyclability levels

# HOW TO CALCULATE your marketing revenue

The revenue concerned corresponds to the manufacture of a product or material for use in the building industry **that has not already been invoiced with an eco-fee.**

It is made up of two main components:

- **Purchases of raw materials, processed for implementation or into finished products;**
- **Manufacturing, installation or any other service related to the use of these elements on building sites.**

On this basis, you calculate building marketing revenue (Y), after first determining the ratio of purchases without eco-fee:

$$Y (\text{€}) = X(\%) \times A \quad \Bigg| \quad X = C \div B$$

TOTAL TURNOVER **A**  
TOTAL PURCHASES **B**  
NON-ECO-FEE PURCHASES **C**

## Example:

You are a joiner

- Your total turnover **A = €2,349,000 excl. tax**
- Your total purchases represent (with and without eco-fee) **B = €1,021,600 excl. tax**
- Your purchases without eco-fee represent **C = €212,000 excl. tax**

$$X = 212,000 \div 1,021,600 = 0.207 \text{ or, as a percentage} = 20.7\%$$

$$Y (\text{€}) = 20.7(\%) \times 2,349,000$$

$$Y (\text{€}) = \text{€}486,243$$

Therefore, **€486,243 (Y)** is used as the basis of declaration for the application of the % detailed in the table on page 33.

$$Y \times 0.12\% = \text{amount of eco-fee to be paid} = \text{€}583 \text{ excl. tax}$$
